Medico-Legal Issues Concerning the EFR	27

Role and Responsibility of an Emergency First Responder

An Emergency First Responder (EFR) is a person trained in Cardiac First Response that possesses additional knowledge and skills in the assessment and management of patients in a pre-hospital environment. An EFR may be part of the emergency medical services, a healthcare practitioner or a member of the public who has undertaken a recognised EFR course.

In addition to basic life support cardiopulmonary resuscitation and automated external defibrillation skills, the emergency first responder possesses defined skills in the further assessment and management of common medical emergencies and trauma, including common paediatric emergencies and in providing assistance during labour childbirth. The EFR possesses appropriate knowledge and skills in assisting with the administration of certain prescribed medication. Emergency first responders are skilled in assisting with the movement of patients and can practice key rescue skills under special authorisation according to CPGs. Finally the EFR has basic training in relevant medico-legal issues and in adopting a professional approach to interacting with patients and other emergency medical services in the pre-hospital setting.

Successful completion of the EFR standard and assessment leads to the award of the joint recognised institution and PHECC award at EFR level. This award ensures that the EFR has fulfilled the educational and training requirements as prescribed by PHECC, thereby possessing the knowledge, skills and professionalism in line with the expectations of the public and the profession.

Emergency first responders must also be committed to the process of continuous responder competence and will be required to maintain their skill levels in both CFR and EFR at defined time intervals.

Learning Outcomes for the EFR Standard

The EFR standard is the expected competency of the student upon completion of a recognised course. A person at the end of a recognised EFR course will be able to:

1. **Recognise and assess** both common life-threatening and common serious medical conditions in a pre-hospital environment.
2. **React** to a pre-hospital emergency utilising appropriate EFR standard of care according to PHECC CPGs.
3. **Respond** in an effective, safe and appropriate manner to a medical emergency and trauma in a pre-hospital environment utilising the EFR skill set.
4. **Record and report** their actions and interventions appropriately during management and at handover to emergency medical services.
5. **Retain** a professional manner and approach in the performance of their duties as an EFR.

The learning objectives in the standard refer to the management of adults and paediatrics unless stated otherwise. The standard of care management for patients with common medical emergencies and trauma is outlined in the PHECC clinical practice guidelines (CPGs). The CPGs may be accessed from the website of the PHECC www.phecc.ie.

Framework for the Emergency First Response Standard

Framework for Emergency First Response Standard	
Learning Outcome	Modules
Recognise and assess both common life-threatening and common serious medical conditions in a pre-hospital environment	Primary survey Secondary survey Anatomy and Physiology
React to a pre-hospital emergency utilising appropriate EFR standards of care according to PHECC CPGs	Continuum of pre-hospital emergency care Principles of lifting and moving Pharmacology
Respond in an effective, safe and appropriate manner, to a medical emergency and trauma in a pre-hospital environment utilising the EFR skill set	Airway and ventilation Respiratory emergencies ¹ Cardiac First Response Cardiovascular emergencies General medical emergencies Bleeding, shock and soft tissue injuries Musculoskeletal, head and spinal injuries Paediatrics Childbirth
Record and report their actions and interventions appropriately during management and at handover to emergency medical services	Information management Communications
Retain a professional manner and approach in the performance of their duties as an EFR	The wellbeing of the EFR Infection prevention and control Medico-legal issues concerning the EFR

¹ The CFR course is a pre or co-requisite to the EFR course.

Learning Outcome 1

Recognise and assess both common life-threatening and common serious medical conditions in a pre-hospital environment	Primary Survey Secondary Survey Anatomy and physiology
--	--

Primary Survey

At the completion of this module the student will be able to outline and demonstrate the elements of a primary survey for the medical and trauma patient while initiating interventions essential to maintain life in accordance with the appropriate CPG(s) and scope of practice for an EFR.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Discuss the components of scene assessment
2. List common hazards found at the scene
3. Explain the reason for identifying the need for additional help or assistance
4. Identify the assessments made under the following as part of a primary survey for a medical and trauma patient as appropriate:
 - Control life threatening haemorrhage
 - Airway
 - c- spine
 - Breathing
 - Circulation
 - Disability
 - Exposure
5. State the reason for the management of cervical spine until trauma is ruled out
6. Discuss the need for assessing the patient for external bleeding
7. Outline the methods for assessing Disability or AVPU assessment
8. List the procedure for Exposure to check for obvious injuries
9. Explain the need for consent prior to assessment and or care management

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Explain why basic life support airway and ventilation skills take priority over other emergency care skills
2. Recognise and respond appropriately to the feelings patients experience during assessment

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the assessment of various scenarios for scene safety scene survey and scene situation while identifying potential hazards and controls
2. Demonstrate the appropriate patient assessments made as part of a primary survey for a medical and trauma patient

Secondary Survey

At the completion of this module the student will be able to outline and demonstrate the elements of a secondary survey for the medical and trauma patient while considering findings and initiating care management in accordance with the appropriate CPG(s) and scope of practice for an EFR.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Outline the reason for forming a general impression of the patient
2. Collate a history based on the Pneumonic SAMPLE: Signs & Symptoms, Allergies, Medication, Pertinent medical history, Last intake, Event (SAMPLE)
3. Collate a focused history based on the Interview Pneumonic OPQRST: Onset, Provocation, Quality, Region / Referral / Recurrence / Relief, Severity and Time (OPQRST)
4. List the components of the detailed physical exam/ head to toe survey
5. Describe the methods for assessing Circulation, Sensation and Movement (CSM)
6. Outline the precautions to take during and after searching the patient for identification and medical history clues
7. State the normal ranges for adults, infants and children for
 - Pulse rate
 - Respiration rate
8. Outline the techniques of assessing a patients vital signs
9. State the reasons when it is not appropriate to commence a secondary survey on scene

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Explain the need for team work when multidisciplinary emergency medical services are at an incident

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate questioning the patient to obtain a SAMPLE history
2. Demonstrate questioning the patient to obtain a OPQRST history
3. Demonstrate obtaining additional information from the family members or bystanders at the scene as appropriate
4. Demonstrate the detailed physical exam/ head to toe survey
5. Demonstrate assessment of vital signs including blood pressure by palpitation

Clinical Anatomy and Physiology

At the completion of this module the student will be able to outline the basic structure and function of the cardio-respiratory and musculoskeletal systems.

Knowledge Objectives

At the completion of this section, the student will be able to:

The respiratory system

1. Describe the structure of the lungs and their position within the thorax
2. Describe the functions of the respiratory system
3. Describe the structure of the upper and lower airway
4. Describe the constituent make up of normal air

The cardiovascular system

1. Outline the functions of arteries, veins and capillaries
2. Describe the structure of the heart and its position within the thorax
3. Define coronary circulation
4. State the functions of the cardiovascular system
5. Define pulse

The musculoskeletal system

1. List the functions of bones and the skeletal system
2. Identify the main bones of the appendicular skeleton on a diagram
3. List the types of joints and give examples of each
4. List the functions of muscles, tendons and ligaments

The blood

1. List the functions of blood

The skin

1. List the functions of skin

Attitudinal Objectives

No attitudinal objectives

Skills Objectives

No skills objectives defined

Learning Outcome 2

React to a pre-hospital emergency utilising appropriate EFR standard of care according to PHECC CPGs.	Continuum of pre-hospital emergency care Principles of lifting and moving Pharmacology
--	--

Continuum of Pre-Hospital Emergency Care

At the completion of this module, the student will be able to explain the principles of maintaining scene safety and able to explain the role and responsibilities of an EFR within the Irish healthcare system

Knowledge Objectives

At the completion of this section, the student will be able to:

1. List the roles and responsibilities of the Emergency First Responder (EFR) in the continuum of pre-hospital emergency care
2. Describe the EFR's responsibility related to personal safety
3. List common hazards found at the scene of a trauma or a medical patient
4. Discuss the roles and responsibilities of the EFR with regard to safety at the scene of an incident of the patient, emergency crew and bystanders
5. State the role the EFR should perform until appropriately trained personnel arrive at the scene of a hazardous material incident

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Realise when required the need to activate the emergency medical services

Skills Objective

At the completion of this section, the student will be able to:

1. Demonstrate the ability to differentiate various scenarios and identify potential hazards

Principles of Lifting and Moving Patients

At the completion of this module, the student will be able to practice moving patients valuing working as a team and understand the particular circumstances when special authorisation according to CPGs can be beneficial to patients.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Outline the specific manual handling hazards identified in the risk assessment and any possible measures to avoid or reduce manual handling
2. List the indications for emergency and non emergency movement of the patient
3. List the various devices associated with moving a patient pre-hospital
4. Explain the authorisations to practice from CPGs known as “special authorisation” and “assist practitioners only”

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Understand the importance of working as a team when lifting and moving patients

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate in teams how to assist with moving a patient with a carrying sheet
2. Demonstrate in teams how to assist with log rolling a patient
3. Demonstrate in teams how to place and secure a patient onto a long board
4. Demonstrate in teams how to assist with the application of an extrication device and move a patient
5. Demonstrate in teams how to assist with moving a patient with an orthopaedic stretcher and other approved lifting and carrying devices/equipment²

² Approved lifting and carrying devices/equipment outlined in full in PHECC CPGs

Pharmacology

At the completion of this module, the student will be able to safely administer and assist patients with self administration of medications in accordance with the appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Define the terms: side effects, indications, contraindications and adverse reactions
2. Differentiate between trade and generic medication names
3. List the prescribed medication which the Emergency First Responder may assist the patient with self- administration
4. List the pre-administration checks to follow when administering medication
5. Explain the importance of establishing if there are any medication allergies
6. Explain the dangers associated with inappropriate administration of medication
7. List the '6 rights' of medication administration
8. List the dose, route of administration, indication, contraindications and side effects of medication for use by Emergency First Responders

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Explain the rationale for the administration of medication

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the pre-administration checks to be undertaken prior to medication administration
2. Demonstrate the administration of all approved medication³ for use by Emergency First Responders
3. Demonstrate documenting medication administration on the relevant patient care report

³ Approved medication are outlined in full in PHECC CPGs

Learning Outcome 3

Respond in an effective, safe and appropriate manner, to a medical emergency and trauma in a pre-hospital environment utilising the EFR skill set	Airway and ventilation Respiratory emergencies Cardiac First Response Cardiovascular emergencies General medical emergencies Bleeding, shock and soft tissue injuries Musculoskeletal, head and spinal injuries Paediatrics Childbirth
--	--

Airway and Ventilation

At the end of this module, a student will be able to clear and maintain an airway and demonstrate safe use oxygen equipment and provide oxygen to a simulated patient using a range of oxygen administration devices in accordance with the appropriate CPGs.

Note: This module must be considered with the Airway and Ventilation module from the CFR Advanced level course.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Describe the steps in head-tilt chin-lift and jaw thrust
2. Relate the mechanism of injury to opening the airway
3. Describe how to administer oxygen to the patient with nasal cannula, a venturi mask and a non re-breather mask
4. Explain why basic life support airway and ventilation skills take priority over most other basic life support skills
5. List the factors that influence accurate pulse oximetry and outline normal values

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate an awareness of the value of oxygen administration
2. Demonstrate a caring attitude towards patients with airway and breathing problems who request pre-hospital emergency care

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate airway and breathing assessment
2. Demonstrate head-tilt chin-lift and jaw thrust

3. Demonstrate the operation of oxygen cylinders and regulators
4. Demonstrate the use of a nasal cannula, a venturi mask and a non re-breather mask and state the oxygen flow requirements needed for each equipments use
5. Demonstrate the use of a pulse oximeter

Respiratory Emergencies

At the end of this module, a student will be able to manage the care of a patient with a respiratory emergency in accordance with the appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. State the signs and symptoms of the patient with inadequate breathing
2. List the pre-hospital emergency care management for the patient with inadequate breathing
3. List signs of respiratory arrest
4. List the common causes of respiratory emergencies

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Communicate with empathy with family members and friends of the patient with a respiratory emergency

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the pre-hospital emergency care management for the patient with inadequate breathing
2. Demonstrate the pre-hospital emergency care management for the patient in respiratory arrest

Cardiovascular Emergencies

At the end of this module, a student will be able to manage the care of a patient with cardiac chest pain and post resuscitation in accordance with the appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Outline the pre-hospital emergency care management for the patient experiencing cardiac chest pain
2. Outline the benefits of post resuscitation care
3. Outline the circumstances when it is inappropriate to commence resuscitation

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate a caring attitude towards the patients with cardiac chest pain who requests pre-hospital emergency care
2. Communicate with empathy with family members and friends of the patient with a cardiac event
3. Understand that a Paramedic and AP can discontinue resuscitation efforts

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the assessment and pre-hospital emergency care management for the patient experiencing cardiac chest pain

General Medical Emergencies

At the end of this module, a student will be able to manage the care of a patient with an acute medical emergency in accordance with the appropriate CPG.

Knowledge Objectives

At the completion of this section, the student will be able to:

2. Identify the patient with an altered level of consciousness
3. Explain the pre-hospital emergency care management for the diabetic patient with an altered level of consciousness
4. Explain the pre-hospital emergency care management for the patient suffering a suspected stroke
5. Identify the patient who presents with seizures/ convulsions
6. Explain the pre-hospital emergency care management for the patient with seizures/ convulsions
7. Identify the patient who presents with allergies and severe allergic reaction
8. Explain the pre-hospital emergency care management for the patient with an allergic reaction and anaphylaxis
9. List various ways that poisons enter the body
10. Identify the patient who presents with poisoning/ overdose
11. Explain in pre-hospital emergency care management for the patient with poisoning/ overdose
12. Identify the patient who presents with exposure to cold
13. Explain the pre-hospital emergency care management for the patient with exposure to cold including submersion hypothermia
14. Explain the pre-hospital emergency care management for the patient with decompression illness
15. Identify the patient who presents with exposure to heat
16. Explain the pre-hospital emergency care management for the patient with exposure to heat
17. Explain the pre-hospital emergency care management for the patient with an epistaxis

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate a caring attitude towards patients with a medical complaint who requests pre-hospital emergency care

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the pre-hospital emergency care management for the patient with a general medical complaint
2. Demonstrate the pre-hospital emergency care management for the diabetic patient with an altered level of consciousness
3. Demonstrate the pre-hospital emergency care management for the patient suffering a stroke
4. Demonstrate the pre-hospital emergency care management for the patient with seizures
5. Demonstrate the pre-hospital emergency care management for the patient experiencing an allergic reaction and anaphylaxis

6. Demonstrate the pre-hospital emergency care management for the patient with poisoning/ overdose
7. Demonstrate the pre-hospital emergency care management for the patient with hypothermia
8. Demonstrate the pre-hospital emergency care management for the patient with exposure to heat
9. Demonstrate the pre-hospital emergency care management for the patient with pain
10. Demonstrate the pre-hospital emergency care management for the patient with an epistaxis

Bleeding, Shock and Soft Tissue Injuries

At the end of this module, a student will be able to manage the patient with external bleeding and shock as well as soft tissue injuries in accordance with appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Differentiate between arterial, venous and capillary bleeding
2. Explain the pre-hospital emergency care management for the patient with external bleeding
3. List the signs and symptoms of hypovolaemic shock
4. Explain the pre-hospital emergency care management for the patient with signs and symptoms of hypovolaemic shock
5. Explain the pre-hospital emergency care management for the patient with a soft tissue injury
6. Explain the burn surface area calculation using Wallace's rule of nines
7. List the common causes of burns and scalds
8. Explain the pre-hospital emergency care management for the patient with burns
9. List the functions of dressing and bandaging

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate a caring attitude towards patients with a traumatic injury who request pre-hospital

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate direct pressure as a method of pre-hospital emergency care management for external bleeding
2. Demonstrate the pre-hospital emergency care management for the patient with hypovolaemic shock
3. Demonstrate the pre-hospital emergency care management for the patient with closed soft tissue injuries
4. Demonstrate the pre-hospital emergency care management for the patient with open soft tissue injuries
5. Demonstrate the pre-hospital emergency care management for the patient with burns

Musculoskeletal, Head and Spinal Injuries

At the end of this module, a student will be able to manage the patient with head suspected spinal or major limb injuries in accordance with appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. State the signs and symptoms of fractures
2. Explain the pre-hospital emergency care management for the patient with a painful, swollen, deformed extremity
3. Relate the mechanism of injury to suspected injuries of the head and spine
4. Outline the indications and risks associated with rapid extrication
5. List the sign and symptoms of a suspected spinal injury
6. Outline how to stabilise the cervical spine
7. Explain the pre-hospital emergency care management for assisting with the patient with suspected spinal injuries
8. State how to stabilise the head and remove the helmet
9. List the signs and symptoms of head injuries
10. Explain the pre-hospital emergency care management for assisting with the patient with head injuries

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate a caring attitude towards patients with traumatic injuries who request pre-hospital emergency services

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the pre-hospital emergency care management for the patient with a painful, swollen, deformed extremity
2. Demonstrate using a splinting device to an upper limb
3. Demonstrate assisting with use of a splinting device for a lower limb
4. Demonstrate manual stabilisation of the cervical spine
5. Demonstrate the application of a cervical collar
6. Demonstrate assisting with the pre-hospital emergency care management for the patient with a suspected spinal injury
7. Demonstrate assisting with the pre-hospital emergency care management for the patient with a head injury
8. Demonstrate helmet removal

Paediatrics

At the end of this module, a student will be able to manage the paediatric patient in accordance with appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. List the causes of pyrexia in an infant and child
2. Describe the pre-hospital emergency care management of the infant or child with a pyrexia
3. List the causes of inadequate respirations in infants and children
4. Describe the pre-hospital emergency care management of inadequate respirations in infants and children
5. List the causes of seizures in the infant and child patient
6. Outline the pre-hospital emergency care management of seizures in infants and children
7. Outline spinal immobilisation for infants and children
8. Outline the care management for children with burns
9. List the signs and symptoms of possible child abuse and neglect
10. Explain the need for critical incident stress support following serious illness or injury to an infant or child

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Demonstrate a professional caring approach to the feelings of the family when dealing with an ill or injured infant or child
2. Rationalise the EFR's own emotional response to caring for infants or children
3. Communicate with empathy to infants and children with an illness or injury, as well as with family members and friends of the patient

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the pre-hospital emergency care management for the infant and child patient with a pyrexia
2. Demonstrate the pre-hospital emergency care management for the infant and child patient with inadequate respirations
3. Demonstrate the pre-hospital emergency care management for the infant and child patient with burns
4. Demonstrate the pre-hospital emergency care management for the infant and child patient with seizures

Childbirth

At the end of this module, a student will be able to assist with the basic care during a pre-hospital delivery in accordance with appropriate CPGs.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. State the indications of an imminent delivery
2. Explain the pre-hospital emergency preparation of the mother pre-delivery
3. Explain the pre-hospital emergency care management of assisting with the normal delivery of a baby

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Explain the rationale for attending to the feelings of a mother in need of pre-hospital emergency care during childbirth
2. Communicate with empathy to mothers during childbirth, as well as with family members and friends

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate assisting with the pre-hospital emergency care management for the normal delivery
2. Demonstrate assisting with the pre-hospital emergency post-delivery care of the mother
3. Demonstrate assisting with the pre-hospital emergency care management for the newly born

Learning Outcome 4

Record and report their actions and interventions appropriately during management and at handover to emergency medical services	Information management Communications
--	--

Information Management

At the completion of this module, the student will be able to include all the required information on a Cardiac First Response (CFR) Report in accordance with the PHECC CFR Report Completion Guide. This module may extend to include any subsequent patient report forms developed by PHECC as relevant.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Explain the rationale for recording patient health information
2. Outline what information is required on the Cardiac First Response (CFR) Report and how it should be entered
3. Explain the essential elements of a verbal handover report to other pre-hospital emergency care teams

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Understand how recording data contributes to a high standard of patient care
2. Explain why documentation should be done in a timely manner but should not distract from care and communication with the patient

Skills Objectives

At the completion of this section, the student will be able to:

1. Complete a CFRR for a given patient scenario
2. Demonstrate the ability to deliver a “hand over” report to other pre-hospital emergency care teams

Communications

At the completion of this module, the student will be able to demonstrate effective and appropriate communication skills.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. List the principles of good interaction with patients (ref- Emergency Care and Transportation of The Sick and Injured By AAOS)
2. Describe how to adapt verbal and non-verbal communication for visually impaired patients and auditory impaired patients
3. Describe the principle barriers to effective patient and team communication
4. State the personal qualities that make an effective therapeutic communicator

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Whilst taking control of an emergency situation, demonstrate a courteous approach toward the patient, their family and bystanders

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate the use of open questioning technique and obtain important and relevant clinical information
2. Demonstrate effective communication with non-English speaking patients
3. Demonstrate communicating with the professional pre-hospital emergency care services ensuring the principles of "Team" are maintained

Learning Outcome 5

Retain a professional manner and approach in the performance of their duties as an EFR	The well-being of the EFR Infection prevention and control Medico-legal issues concerning the EFR
---	---

The Well-Being of the Emergency First Responder

At the completion of this module, the student will be able to outline the importance of maintaining a balance in personal lifestyle and work related stressors.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. List possible emotional reactions that an Emergency First Responder (EFR) may experience when faced with trauma, illness, death and dying
2. Outline the possible reactions that a family member may exhibit when confronted with death and dying
3. State the possible reactions that the family of an EFR may exhibit
4. List the steps in approaching the family confronted with death and dying
5. List the signs and symptoms of critical incident stress
6. State possible steps that the EFR may take to help reduce/ alleviate stress

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Explain the importance of understanding the response to trauma, illness, death and dying
2. Show compassion when caring for the physical and mental needs of patients

Skills Objectives

No skills objectives defined

Infection Prevention and Control

At the completion of this module, the student will be able to demonstrate the principles of infection prevention and control.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. Define standard infection control precautions
2. List the steps to take for personal protection against infection
3. Distinguish between cleaning and disinfecting, be cleaned or disinfected, or is single use only
4. State the importance of vaccinations in protecting personal health

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Adopt standard infection control precautions as fundamental to patient care

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate effective hand washing technique
2. Demonstrate correct glove use and disposal
3. Demonstrate the correct disposal of clinical waste

Medico-Legal Issues Concerning the EFR

At the completion of this module, the student will be able to outline the ethical and legal framework in relation to patient care pre-hospital.

Knowledge Objectives

At the completion of this section, the student will be able to:

1. State the conditions necessary for the Emergency First Responder (EFR) to have a duty of care
2. Explain the importance, necessity and legality of patient confidentiality
3. Outline methods of obtaining patients consent
4. List the actions to take to assist in the preservation of a crime scene

Attitudinal Objectives

At the completion of this section, the student will be able to:

1. Participate willingly in the care of all patients
2. Outline why it is inappropriate to judge a patient based on a cultural, gender, age or socioeconomic model and to vary the standards of care rendered as a result of that judgement

Skills Objectives

At the completion of this section, the student will be able to:

1. Demonstrate obtaining consent from a patient in a variety of scenarios
