

EMT Continuous Professional Competence Patient Contact Certification

This is to certify that EMT _____ Name _____ PIN number _____ has completed an
Intramuscular vaccination to _____ Patients. These were completed on the _____
2021 and at the following vaccination centre;

Certified by;

Signed: _____

Name (Block Caps) _____

Title/position: _____ (To be completed by vaccine centre manager/Doctor)

Date: _____

EMTs MUST also complete the Vaccinator patient contact learning log located in the Self-Selected Items section of the EMT CPC portfolio.

PHECC have recently implemented CPGs to assist practitioners in the delivery of vaccinations for the COVID-19 pandemic response. As a result of this, PHECC have recognised that EMTs who deliver COVID-19 vaccines are entitled to claim patient contacts for their Continuous Professional Competence portfolio. To claim patient contacts, the EMT must have a completed Patient Contact Certificate along with the vaccinator patient contact learning log (located in the self-selected items section of the EMT CPC portfolio). Each vaccine deliver is counted as one patient contact. Duty performed in the observation section of the vaccination centre cannot be included as a patient contact for EMT CPC. Vaccinator patient contacts shall be construed as delivery of an IM injection for the administration of a COVID-19 vaccination in a pre-hospital setting.

The certificate above should be completed by the Senior Medical Practitioner or the Vaccination Centre manager on duty for that day. EMTs are advised to print off the certificate and bring it with them when they are completing vaccinations.

Vaccinator Patient Contacts should **NOT** be included in the normal patient contact section of the CPC portfolio. In addition, PPS numbers of patients, or any identifiable factors, should **NOT** be recorded in an EMTs CPC portfolio.
